Come and get valuable work experience this Vacation at Alphawave

If you are looking for an opportunity to get exposure to a wide range of companies, working across a diverse set of technologies and with some of the best minds in the industry then Alphawave Group could be a great choice for you!

About Alphawave

Alphawave is an established technology investment group, enabling the best in their field to build successful international businesses.

The portfolio consists of 16 innovative tech businesses, over 375 employees and more than 175 engineers and developers.

The Alphawave portfolio of companies offers recruits the opportunity to work in large scaling businesses like Skynamo and Inrange with 100+ employees, or small teams of only six employees like Sozo Labs. Either way, your days will be filled working alongside leaders in their field of technology to create and develop leading edge products that will be sold and used across the world.

What you will experience and learn

If your interests lie in app development, analytics, machine learning, engineering, data science, augmented or virtual reality then Alphawave could be a great place to check out.

All of the Alphawave companies are working on projects across these domains, which will give you the opportunity to see how these technologies are used in a business environment.

If the work is not exciting enough, we offer a free hot lunch every day and your choice of pizza on Friday! We also have a coffee machine that professional baristas would be envious of, so not only will you learn great technical skills, but by the time you head back to university, you can wow your friends with all the creative foam animals you can craft on top of your cappuccinos.

Ok that sounds awesome, how do I qualify?

It's fairly easy. You qualify if you are studying towards a B.Sc or B.Eng university degree. You are in 2nd year or higher and have managed to sustain good academic results so far!

But here's the catch, we don't have a lot of spots available.

Why? Because vacation work for Alphawave isn't about bringing you in and letting you practice the skill of Olympic thumb twiddling while exciting things happen around you. It also isn't about throwing you in the deep end and realising you left the water wings in your gym bag. It's about integrating you into existing projects and giving you real world exposure so that you can go back armed with real practical knowledge and answer those important things you've always wondered about, such as:

- Is this what I want to do with the rest of my life?

- Oh, so that's what data science is...

- I had no idea building apps required so many different skills.

- I didn't realise how immersive technologies like VR and AR could be.

- How I might get to play golf while work on exciting projects!

So how will I stand out?

- You love solving complex problems

- You can take on any challenge, are keen to roll up your sleeves and get stuck in

- Dependable, responsible and collaborative

- You work really well in a team, but can also get stuff done on your own

- You're a fast learner and can show how you have gone above and beyond – even in your course content

- You are articulate and have excellent communication skills

- You are excited about technology

Still here? Awesome!

- Please send us a CV with a covering letter to **careers@alphawave.co.za** Your covering letter is your biggest opportunity to make an impact

- If you have any questions please include them in the email

- Once we have your application, we will review it and get back to you as soon as humanly possible

- If you make the cut, here's what you can expect:

  o **An initial interview where we find out more about you**

  o **We decide which Alphawave company is the best fit based on the first interview**

  o **A meet and greet with the company we have paired you with**

We can't wait to get your application!
