

Launch your career with Alphawave

It's time to launch your career after working extremely hard the past few years, to obtain your degree. If you are looking for exposure to a wide range of companies, a diverse set of cutting-edge technologies and some of the best minds in the industry, then Alphawave is an excellent choice for you!

About Alphawave

Alphawave is an established technology investment group, enabling the best in their field to build successful international businesses. Our portfolio consists of 16 innovative tech businesses, over 375 employees and more than 175 engineers and developers.

The Alphawave portfolio of companies offers recruits the opportunity to work in large scaling businesses like Skynamo and Inrange with 100+ employees, or small teams of only six to 10 employees like Sozo Labs or Scout. Either way, your days will be filled working alongside leaders in their field of technology to create and develop leading products that will be sold and used across the world.

Recruits can enjoy the exhilaration of a start-up business, without the risk usually associated with this environment. All our companies form part of Alphawave Group, who support and fund these businesses from concept to being market ready, to growing internationally. If you work in an Alphawave company, your career opportunities are not just limited to that company. You will have access to colleagues across the Alphawave Group and have the opportunity to learn from and move to other companies in the portfolio when relevant positions open up that better suit your skill-set or career development plans.

What will you experience and learn?

If your background and studies are in line with software, app development, machine learning, engineering, data science, augmented or virtual reality, or electronics, then Alphawave and our portfolio companies will be right up your alley.

Our portfolio companies focus on these and other deep tech fields, giving you the opportunity to see how these technologies are used in a business environment, while enabling you to find the right match for your career needs.

If the work is not exciting enough, we offer a free hot lunch every day and your choice of pizza on a Friday! We also have a coffee machine that professional baristas would be envious of, so not only do you learn great technical skills, but by the time you really enter the world of work, you can wow your colleagues with all the creative foam animals you can craft on top of your cappuccinos.

How do you qualify?

You will need a B.Sc or B.Eng university degree, preferably with honours, and you will need to have sustained good academic results. Showing that you have gone the extra mile will be very helpful, so if you have been in any leadership roles or committees, be sure to let us know.

But here's the catch, there are limited spots available.

Why? Because internships at Alphawave aren't about bringing you in and letting you practice the skill of Olympic thumb twiddling while exciting things happen around you. It also isn't about throwing you in the deep end and realising you left the water wings in your gym bag. It's about integrating you into existing projects and giving you real world exposure, so that you can find that thing you love quickly and start your career off on a positive note.

So how will you stand out?

- You thrive on solving complex problems
- You can take on any challenge and you're keen to roll up your sleeves and get stuck in
- Dependable, responsible and collaborative
- You work really well in a team, but can also get stuff done on your own
- You're a fast learner and can show you have gone above and beyond - even if the only examples are from your course content
- You are articulate and have excellent communication skills
- You love technology

Still here? Great!

- Please send us your CV, cover letter, ID, and updated academic transcript to careers@alphawave.co.za (Your cover letter is your biggest opportunity to make an impact).
- If you have any questions, please include them in the email
- Once we have processed your application, we will review it and get back to you as soon as humanly possible
- If you make the cut, here's what you can expect:
 - An initial interview where we find out more about you
 - We decide which Alphawave company is the best fit based on the first interview
 - A meet and greet with the company we have paired you with

We can't wait to get your application!
