

Our Business

Inrange®'s mission, simply, is to make golf a game for Everyone.

*Founded by a group of highly respected South African engineers who used their expertise in the world of radar and radio astronomy to develop the most advanced, accurate and reliable **golf ball tracking** system in the world.*

A company that:

- Offers growth in every role*
- Offers the ability to work with the latest radar technology and gaming software*
- Offers the chance to be part of a larger family of companies within the Alphawave group.*

Internship opportunities

Join our Software Team!

Full-stack software developer wanted! Write clean, reusable code with a focus on quality assurance and documentation. Non-tech skills like competitive sports and attention to detail are a plus. Golf experience? Even better!

Join our Engineering Team!

Help develop the radar system that accurately tracks millions of golf balls a month. Get exposure to RF and circuit design, firmware, algorithm and software development. We are looking for a team player who enjoys solving uniquely challenging problems.

Being part of the Team

- Opportunities for technical and non technical learning
- The option and ability to work either remotely or in our lovely offices in Stellenbosch (or a mix of the two, as the role requires)
- Being part of a global business with presence in the US and the UK and sites on just about every continent
- Getting out on to the driving range to enjoy what we have built (it's not just for golfers, if our devs don't enjoy it then we haven't succeeded in our mission)
- Working with arguably the best technical minds in the country
- And of course great coffee and food at the office!

Check out our product video here.
